

PROFESSIONAL EXPERIENCE

- **JuliaHub Inc.** India
Senior Software Engineer *Jun 2020 - Present*
 - **DyadCompiler:**
 - * Developed symbolic-numeric compiler passes for scientific machine-learning (SciML) workloads: principled structural recovery of heavily scalarized model code via isomorphic-subgraph clustering, with every rewrite certified by randomized numerical equivalence testing.
 - * Shrank generated function bodies (25%) fewer statements, scalar additions halved), cutting compile latency on large dynamical systems and recovering the array/loop structure that enables size-independent generated code and accelerator targeting.
 - **DyadSurrogates:**
 - * Served as Technical Lead for the DyadSurrogates Team under Dyad. Oversaw a team of 5 developers in implementing modular and full-scale workflows to automate surrogatization of continuous-time systems.
 - * Developed infrastructure and workflows for agents specialized for modeling and simulation.
 - * Developed novel surrogatization pipelines to which scale to dynamical systems requiring complex inputs and from unknown dynamics.
 - **Williams F1:** Modeled the car's speed-over-ground sensor with implicit neural representations (periodic activations, implicitly-enforced physical constraints) fit to global system dynamics in a limited-data regime — removed over 3 kg of weight from the vehicle.
- **JuliaHub Inc.** Bangalore, India
Data Scientist *Jun 2018 - 2020*
 - **Dyad:** Developed and trained high quality ML surrogates for Density Functional Theory (DFT) simulations for accelerating battery modelling and materials science. Further developing surrogates for non-autonomous dynamical system identification.
 - **ARPA-E:** Collaborated with the Viswanathan Group at Carnegie Mellon University on accelerating discovery of high quality electrochemical materials. Developed novel methods to generate candidate molecules via score-based modelling. Worked on novel methods of determining modeling electrochemical kinetics using automatic differentiation.
 - **Scaling for ML Tasks:** Demonstrated a high throughput training pipeline of large neural networks with big datasets with Flux. Developed a flexible and performant model parallelism framework using a distributed DAG scheduler. Designed and developed a mass experimentation framework used by several teams in the company. It is designed to generate reproducible experiment runs, track artifacts and metrics of training, alongside any code changes necessary automatically.
 - **FluxML:** Developer of the FluxML machine learning ecosystem and its packages. Flux has grown an active community with over 4.7k stars on GitHub and over 250 contributors across the board. Instituted FluxML as a NumFocus affiliated project.

SELECTED TALKS

- **Designing SciML components in ModelingToolkit.jl:** JuliaCon 2025
- **Train a Llama(2) in Julia!:** JuliaCon 2024
- **Modern CI/CD Machine Learning workflows using Julia:** JuliaCon 2024
- **Scaling Up Training of Any Flux.jl Model Made Easy:** JuliaCon 2022
- **A Tour of the Differentiable Programming Landscape with Flux.jl:** JuliaCon 2021
- **Machine Learning with Julia:** ODSC 2018, 2019, 2020
- **On The State of Flux.jl:** JuliaCon 2020

WORKSHOPS, PUBLICATIONS AND POSTERS

- **Improving process systems engineering with specialized multi-agent large language models:** Chemical Engineering Journal Advances, Volume 26 101141
Fernando Arrais R.D. Lima, Anas Abdelrehim, Ashutosh Bharambe, Marius Micluta-Câmpeanu, **Dhairya Gandhi**, Anshul Singhvi, Venkateshprasad Bhat, Morten Piibeleht, Argimiro R. Secchi, Maurício B. de Souza Jr., M. Enis Leblebici, Christopher Rackauckas, Idelfonso B.R. Nogueira
- **Active Learning Enhanced Surrogate Modeling of Jet Engines in JuliaSim:** AIAA 2025-2323. AIAA SCITECH 2025 Forum. January 2025
Anas Abdelrehim, **Dhairya Gandhi**, Sharan Yalburgi, Ashutosh Bharambe, Ranjan Anantharaman and Christopher V. Rackauckas
- **Nonequilibrium Electrochemical Phase Maps: Beyond Butler–Volmer Kinetics:** The Journal of Physical Chemistry Letters, American Chemical Society, 2022
Rachel C. Kurchin, **Dhairya Gandhi**, Venkatasubramanian Viswanathan
- **Score-Based Generative Models for Molecule Generation:** ML4Molecules, NeurIPS 2021
Dwaraknath Gnaneshwar, Bharath Ramasundar, **Dhairya Gandhi**, Venkat Vishwanathan
- **ACED: Accelerated Computational Electrochemical Systems Discovery:** ML for Climate Change, NeurIPS 2020
Rachel C Kurchin, Eric Muckley, Lance Kavalsky, Vinay Hegde, **Dhairya Gandhi**, Xiaoyu Sun, Matthew Johnson, Alan Edelman, James Saal, Christopher V Rackauckas, Bryce Meredig, Viral Shah, Venkat Viswanathan
- **Fashionable Modelling with Flux:** Systems for ML, NeurIPS 2018
Michael J Innes, Elliot Saba, Keno Fischer, **Dhairya Gandhi**, Marco Concetto Rudilosso, Neethu Mariya Joy, Tejan Karmali, Avik Pal, Viral B. Shah
- **Julia - A Differentiable Programming Language for Machine Learning:** Heiße 2018
Keno Fischer, **Dhairya Gandhi**, Sebastian Pfitzner (Julia Computing)
- **Modern Machine Learning with Flux:** Computing Brazil, Brazilian Computer Society 2019
Dhairya Gandhi, Keno Fischer, Micheal Innes, Elliot Saba, Viral B. Shah

OPEN SOURCE PACKAGES AND CONTRIBUTIONS

- **DaggerFlux.jl** [link]: Generic Scalability for Training ML models on diverse system architectures with multiple accelerators.
- **Flux.jl** [link]: Lead Developer and Maintainer of the FluxML Differentiable Programming Ecosystem in Julia.
- **Zygote.jl** [link]: Flexible, performant, backend agnostic automatic differentiation in Julia.
- **JuliaCon 2023** [link]: Served as Program Chair for the "Finance And Economics" track.
- **Torch.jl** [link]: Exposing kernels from torch in Julia.
- **Google Summer of Code Mentor 2019, 2020, 2021** [[link], [link], [link]]: Notable projects include a differentiable ray tracer (RayTracer.jl), making Density Functional Theory Toolkit (DFTK.jl) differentiable, and a fast 3D computer vision library - Flux3D.jl.
- **Google Code-In 2019:** Program administrator for the Julia Programming Language.
- **Google Season of Docs 2020:** Project aimed at updating the FluxML website. [link]
- **Julia Summer of Code Mentor 2019, 2020, 2021:** Notable projects include a differentiable computer vision engine in Julia [link] - DiffImages.jl.

EDUCATION

- **Birla Institute of Technology and Science, Pilani** Hyderabad, India
Bachelor of Engineering (Hons.) in Electrical and Electronics Aug. 2014 – July 2018

PROGRAMMING SKILLS

- **Languages:** Julia, Python, Javascript **Experience:** Machine Learning, Program Transformation
